WaterStop

Remotely controlled water shutoff valve

Not a drop of problems

WaterStop allows you to remotely shut off the water at a facility with an Ajax security system. The device combines a high-quality valve and a powerful electric actuator with a control unit connected to an Ajax hub via the Jeweller encrypted radio protocol. You can control WaterStop from anywhere in the world. Check the device status and change the valve position at any moment — all you need is an Internet connection and the Ajax app.

If LeaksProtect or a third-party water leak detector is triggered, WaterStop will automatically shut off the water in 5 seconds. At the same time, all Ajax users and the security company receive a notification about the alarm and scenario activation. In addition to the water leak alarm scenario, it is possible to set the water shut-off at a specific time or when the security system is armed.

Up to 1,100 m of communication distance with an Ajax hub	**Jeweller radio communication** ● Two-way communication ● TDMA ● Encryption ● Frequency hopping	Bonomi valve ½, ¾ or 1" included ISO 5211 standard
Up to 3 years of battery life	Automatic stuck prevention	IP56 enclosure protection
Electronics protected against overheating	Compatible with cold and hot water pipes	Mounting the electric actuator without additional tools
Input for external power supply 9 V⎓	Electric actuator protection against unauthorized dismantling	Button and lever to shut off the water manually
Automation scenarios	4 mounting positions	Water shut−off in 5 seconds
